@QBEConnect®

Puts you in control of your clients reporting needs

You can now access QBE's Workers Compensation claims reporting system through @QBEConnect, the online reporting and analysis tool that enables you to manage client claims and reporting.

@QBEConnect provides access to current information giving you the power to respond faster to your business and client needs.

@QBEConnect gives you:

- Online access to current data
- Easy-to-use graphical interface
- Fast access to standard reports
- Ability to build, print and export reports in Excel, HTML and PDF format
- Information on a national level from our data mart
- Up-to-date monitoring of incidents and claims
- Control of system administration
- Ability to co-brand reports

1. Real time access to current data

Data is uploaded on @QBEConnect every day*, providing you with immediate access to current information for your clients any day of the week.

2. Reporting made easy

Unlike other claims reporting tools, @QBEConnect is the 'first of its kind' to provide a drill-down function allowing you to create and interpret data in many different ways.

The tool is web-based with a graphical reporting interface, which makes the report easier to interpret and understand. You can select from either standard reports using the reporting Wizard or, alternatively, create your own style of report using the custom reporting tool.

A co-branding option gives you the ability to personalise your reports, therefore enhancing your service offering to your clients.

3. Report access and management – you're in control

Once you are set up to use @QBEConnect you control the administration. You can allocate your staff access to particular policies and states, and save reports for shared or private access. Online help can be accessed at any time.

Because you're in control, and @QBEConnect is web enabled, it has greater penetration into your business.

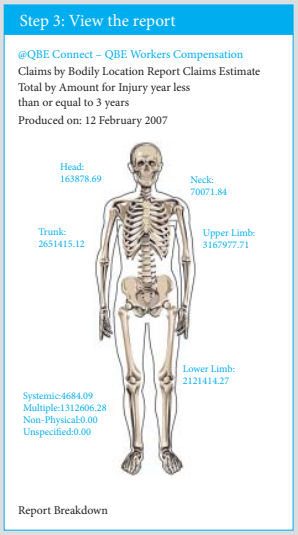
4. Standard reports – three easy steps

You can select from various standard reports, including charts, in three easy steps:

Step 1: Choose a report

Step 2: Select the parameters

Step 3: View the report



Data for NSW, ACT, NT and WA updated daily. VIC data updated weekly.
